H.P. Acthar® Gel is a prescription medicine for people with symptoms of sarcoidosis.

SELECT IMPORTANT SAFETY INFORMATION

Acthar is injected beneath the skin or into the muscle. It should never be injected into a vein.

You should NOT take Acthar before talking to your doctor if you have any of these conditions: A skin condition called scleroderma, bone density loss, any infections, herpes simplex of the eye, had recent surgery, stomach ulcers or history of stomach ulcers, heart failure, uncontrolled high blood pressure, have been given, or are about to receive, a live or live attenuated vaccine, or have allergies to pig-derived protein. Tell your doctor if you are pregnant or plan on becoming pregnant.

Please see Important Safety Information throughout this brochure. Please see accompanying full Prescribing Information.
Welcome to treatment with Acthar. Acthar is an FDA-approved medication that works with your body to help treat your symptoms of sarcoidosis. Acthar is an injection given subcutaneously (under the skin) or intramuscularly (into the muscle).
Read on to learn more about Acthar and helpful support programs such as home injection training and nurse counseling.

What is Acthar?

- H.P. Acthar Gel, commonly known as Acthar, is a prescription medication that is FDA approved for the treatment of multiple conditions, including symptoms of sarcoidosis, and has been used for many years
- Acthar contains the hormone ACTH, which stands for adrenocorticotropic ("a-DRE-no-cor-ti-co-tro-pic") hormone
- Acthar is a gel when refrigerated; at room temperature, it changes to liquid form, ready for injection. Acthar should be kept refrigerated (36°–46°F or 2°–8°C) between uses

Only your healthcare provider can determine if Acthar is right for you.

Why has my healthcare provider prescribed Acthar for me?

After your discussions together, your healthcare provider reviewed your clinical assessment and determined that Acthar is an appropriate option for the treatment of your symptoms of sarcoidosis.
Contact your healthcare provider regarding any questions you have about your treatment.

SELECT IMPORTANT SAFETY INFORMATION

DO NOT take Acthar until you have talked to your doctor if you have any of the following conditions:

- A skin condition called scleroderma
- Bone density loss or osteoporosis
- Any infections, including fungal, bacterial, or viral
- Eye infections, such as ocular herpes simplex
- Had recent surgery
- Stomach ulcers or a history of stomach ulcers
How does Acthar work?*

- Acthar is believed to work with your immune system to help impact inflammatory and immune processes
- Acthar is not a steroid, but one of the ways it is thought to work is by helping your body produce its own natural steroid hormones
- Acthar is designed to provide a prolonged release of the medication after it is injected

What are the most common side effects?

Common side effects of Acthar may include:
- Fluid retention
- Changes in blood sugar
- Increased blood pressure
- Behavior and mood changes
- Changes in appetite and weight

Remember, everyone responds differently to treatment. Watch for any changes in how you feel and be sure to let your doctor know. He or she may be able to adjust your treatment or find ways to manage any side effects. For more information, ask your doctor, nurse, or pharmacist, or visit Acthar.com. You may report side effects to the FDA. Call 1.800.FDA.1088 or visit www.fda.gov/medwatch. You may also report side effects by calling 1.800.778.7898.

Acthar is believed to work with your immune system*

*While the exact way Acthar works in the body is unknown, further studies are being conducted. This information is based on laboratory data and how it is related to patient benefits is unknown.

SELECT IMPORTANT SAFETY INFORMATION

DO NOT take Acthar until you have talked to your doctor if you have any of the following conditions: (continued)

- Heart failure
- Uncontrolled high blood pressure
- Allergies to pig-derived proteins
- Have been given or are about to receive a live or live attenuated vaccine
- Suspected congenital infections (in children under 2 years of age)

- If you have been told that you have Cushing’s syndrome or Addison’s disease

Tell your doctor about any other health problems that you have. Give your doctor a complete list of medicines you are taking. Include all nonprescription medicines, vitamins, and herbal supplements that you are taking.

Please see Important Safety Information throughout this brochure. Please see accompanying full Prescribing Information.
How is Acthar administered?

- Acthar is an injection that can be given subcutaneously (beneath the skin) or intramuscularly (into the muscle)
- Acthar should never be given intravenously (into a vein), by mouth, or in any area except beneath the skin or into the muscle
- Acthar can be used when and where it is best for you. It can be self-injected or given to you by a friend, family member, caregiver, or your healthcare provider
- Your doctor will advise you on how and where to inject Acthar and what the appropriate dose is for you

For more information about injecting, please see the accompanying Injection Guide and DVD, or visit Acthar.com/SarcInjection.

What if I miss a dose of Acthar?

- Talk with your doctor as soon as you realize that you missed a dose
- Your doctor will let you know when to take the next dose
- If you have questions about your Acthar dose, talk to your healthcare provider

Find out more at Acthar.com/Sarc

SELECT IMPORTANT SAFETY INFORMATION

What is the most important information I should know about Acthar?

- Never inject Acthar directly into a vein
- Always inject Acthar beneath the skin or into the muscle
Can I take other medications while taking Acthar?

- Tell your doctor about any other health conditions you may have or medicines you are taking, including prescription and non-prescription medicines, vitamins, and herbal supplements
- Continue taking your other treatments as prescribed by your doctor

Can I get financial assistance for Acthar?

- The Acthar Support & Access Program (A.S.A.P.) was created because getting help working with your insurance company and paying for medication are sometimes needed
- A.S.A.P. works directly with your healthcare provider and insurance company to help try to secure the best coverage with the lowest possible co-pay

A.S.A.P.
was created to help ensure that all eligible patients who need Acthar can get it

SELECT IMPORTANT SAFETY INFORMATION

What is the most important information I should know about Acthar? (continued)

- Follow your doctor’s instructions for injecting Acthar
- Never stop treatment suddenly unless your doctor tells you to do so
- Try not to miss any scheduled doctor’s appointments. It is important for the doctor to monitor you while taking Acthar
Acthar Support & Access Program (A.S.A.P.)

A.S.A.P. is a no-cost resource provided to patients that:

- Contacts your insurance company to help try to secure the best insurance at the lowest possible co-pay
- Helps ensure that Acthar is sent directly to your home as fast as possible

A.S.A.P. helps make Acthar affordable for patients by identifying sources of financial assistance including:

- $0 co-pay for eligible patients with commercial or private insurance*
- Acthar offered at no cost for eligible uninsured and underinsured patients†
- Other sources of financial assistance for qualified patients in need‡

To learn more about A.S.A.P., visit Acthar.com/SarcASAP or call A.S.A.P. at 1.888.435.2284.

*The Acthar Commercial Co-pay Assistance Program provides drug co-pay assistance of up to $25,000 per calendar year for eligible patients. This program is not for patients receiving prescription reimbursement under any federal-, state-, or government-funded insurance programs or where prohibited by law. Please see additional Terms and Conditions and Eligibility Criteria on pages 8–9.
†Programs are administered via third-party organization.
‡Programs are administered via an independent charitable organization.

Getting your medication

Your healthcare provider sends your Acthar prescription to A.S.A.P.

A.S.A.P. works with your insurance company and a Specialty Pharmacy

You receive a call

- A.S.A.P. may call for information
- The Specialty Pharmacy will call to schedule delivery

Acthar is delivered to your door

If you do not receive a call from the Specialty Pharmacy within 3 days, please contact A.S.A.P. at 1.888.435.2284.
Home Injection Training Services

- You can have a licensed nurse visit you at your home to provide Home Injection Training Services and answer any questions about administration
- This service is provided at no cost to patients and caregivers, and can be used more than once

To find out more about these free Home Injection Training Services, you or your caregiver can call A.S.A.P. at 1.888.435.2284.

Personalized Nurse Support with ActharPACT

- ActharPACT (Patient and Acthar Coaching Team) offers you access to a 24-hour nurse help line, plus helpful treatment reminders—all at no cost
- By signing up, you can:
  - Talk to a trained nurse about Acthar treatment and any challenges that may come up
  - Get a personal nurse coach who can answer your questions and connect you to the right resources
  - Get suggestions to problem solve and stay motivated throughout your treatment
  - Receive individualized mailings with helpful tips

To sign up for ActharPACT, visit ActharPACT.com or call 1.877.546.PACT (7228).

SELECT IMPORTANT SAFETY INFORMATION

What is the most important information I should know about Acthar? (continued)

Acthar and corticosteroids have similar side effects.
- You may be more likely to get new infections. Also, old infections may become active. Tell your doctor if you see any signs of an infection. Contact your doctor at the first sign of an infection or fever. Signs of infection are fever, cough, vomiting, or diarrhea. Other signs may be flu or any open cuts or sores

Please see Important Safety Information throughout this brochure.
Please see accompanying full Prescribing Information.
Acthar Commercial Co-pay Assistance
Program terms and conditions

- The Acthar Commercial Co-pay Assistance Program provides drug co-pay assistance of up to $25,000 per calendar year for eligible patients.
- This program is valid for eligible, privately insured patients. See Eligibility Criteria for more details.
- This program is not valid for prescriptions for which payment may be made in whole or in part under federal or state health programs, including but not limited to Medicare or Medicaid.
- This program is not valid for uninsured patients.
- Program offer is limited to one per person and is not transferable.
- Patients should consult their insurance provider concerning any limitations that may apply to this program under their insurance policy.
- The program does not represent prescription drug coverage or insurance and is not intended to substitute for such coverage.
- Patients are responsible for any co-payment or co-insurance costs above and beyond the program’s annual maximum benefit.
- Void where prohibited by law.
- Not valid outside the United States.
- Mallinckrodt ARD, Inc. reserves the right to terminate or modify this program at any time without notice.

SELECT IMPORTANT SAFETY INFORMATION

What is the most important information I should know about Acthar? (continued)

- When taking Acthar long term, your adrenal gland may produce too much of a hormone called cortisol. This can result in symptoms of Cushing’s syndrome. This may cause increased upper body fat, a rounded “moon” face, bruising easily, or muscle weakness.
- Sometimes when you stop taking Acthar long term, your body may not produce enough natural cortisol. This is called “adrenal insufficiency.” Your doctor may prescribe a steroid medicine to protect you until the adrenal gland recovers.
Eligibility criteria

- Approved indication
- US permanent resident
- Patient (or patient’s legal representative) must be 18 years of age or older to opt in to program
- Commercially or privately insured
- Not insured by a federal or state healthcare plan or where prohibited by law

"Things have changed since I’ve started taking Acthar. I walked one day to the top of the steps, and I wasn’t breathing hard, and that was my benchmark.”

Watch Len and Marshall’s story on the accompanying DVD.

SELECT IMPORTANT SAFETY INFORMATION

What is the most important information I should know about Acthar? (continued)

- You might develop high blood pressure, or retain too much fluid. As a result of this, your doctor may recommend some changes to your diet, such as eating less salt and taking certain supplements
- Vaccines may not work well when you are on Acthar. Talk to your doctor about which vaccines are safe to use when you are taking Acthar

Please see Important Safety Information throughout this brochure. Please see accompanying full Prescribing Information.
SELECT IMPORTANT SAFETY INFORMATION

What is the most important information I should know about Acthar? (continued)

- Acthar may hide symptoms of other diseases. This can make it more difficult for your doctor to make a diagnosis if something else is going on.
- Stomach or intestinal problems. Acthar may increase the risk of bleeding stomach ulcers. Tell your doctor if you have stomach pains, bloody vomit, bloody or black stools, excessive tiredness, increased thirst, difficulty breathing, or increased heart rate.
- Taking Acthar can make you feel irritable or depressed. You may also have mood swings or trouble sleeping.
- If you have other conditions, such as diabetes or muscle weakness, you may find they get worse.
- You might develop certain eye conditions, such as cataracts, glaucoma, or optic nerve damage.
- Your body may develop allergies to Acthar. Signs of allergic reaction are:
  - Skin rash and itching
  - Swelling of the face, tongue, lips, or throat
  - Trouble breathing
- Long-term Acthar use can affect growth and physical development in children. This can be reversed when Acthar is no longer needed.
- Acthar may cause osteoporosis (weak bones).
- Acthar might harm an unborn baby. Therefore, tell your doctor if you are pregnant or plan on becoming pregnant.

H.P. Acthar® Gel
(repository corticotropin injection) 80 U/mL
SELECT IMPORTANT SAFETY INFORMATION

What are the most common side effects of Acthar?
The most common side effects of Acthar are similar to those of steroids. They include:
- Fluid retention
- High blood sugar
- High blood pressure
- Behavior and mood changes
- Changes in appetite and weight

Specific side effects in children under 2 years of age include:
- Increased risk of infections
- High blood pressure
- Irritability
- Symptoms of Cushing’s syndrome
- Thickening of the heart muscle (cardiac hypertrophy)
- Weight gain

The above side effects may also be seen in adults and children over 2 years of age.

These are not all of the possible side effects of Acthar.

Tell your doctor about any side effect that bothers you, or that does not go away. Call your doctor or pharmacist for medical advice about side effects.

You may report side effects to the FDA. Call 1.800.FDA.1088 or visit www.fda.gov/medwatch.
You may also report side effects by calling 1.800.778.7898.

Please see accompanying full Prescribing Information.
